

Scandic

Scandic Springs, a Bay Area leader in precision metal stampings for 51 years, is seeking a journeyman level Tool and Die Maker to join our tooling team.

You should have extensive experience in the building, maintaining, and troubleshooting of progressive, compound, and blanking tools.

You should have experience with conventional milling, lathe and surface and form grinding. Wire EDM ability is a plus. You also must have your own tools, be able to read and understand prints, and use optical comparators for inspection of finished parts. Experience with AutoCad or Solidworks is preferred but not required.

Scandic is one of the few Northern California companies to design, build, and maintain hard tooling. We create stamping and forming tools to serve customers in the automotive, medical, aerospace and networking industries. Our presses range from 35 to 220 tons, with both servo and mechanical presses. We also build and service tooling on contract for other companies that do not have their own toolroom.

If you are toolmaker stuck in a boring position of simply sharpening and maintaining dies, this position offers creativity and career growth.

Benefits include medical, dental, and vision insurance; paid vacation, holidays, and sick days; 401(k) matching; and tuition reimbursement.
