Full Job Description

We currently have an excellent opportunity for an experienced Conventional Manual Machinist/Grinder.

In this position, you will help us recondition rolls and parts for the Paper and Steel Industries, using a variety of equipment, such as a manual grinder, manual lathe and a micrometer. You may also be using fork lifts, over head cranes, welders, cut off saws, and air tools.

We would be willing to train the right candidate to operate a manual engine lathe and/or grinder.

We will teach you to do the following:

- Setup a manual grinder and lathe, and true material in a 4 jaw chuck and between centers.
- Grind the OD of cylinders and turn material in a steady rest, and hold close tolerances.
- You will become proficient in reading and understanding drawings, layouts, and conventional lathe work, and will have the ability to accurately measure parts produced, assuring conformance to prints, sketches and drawings with supervision, using calipers, micrometers, and other measuring equipment.
- You will learn the properties of various raw materials to assure proper set up with respect to speeds and feeds, required tooling, correct tool materials and cost control.
- You will also be cross-trained on other machines to fill roles outside of primary job responsibilities to act in the place of absent employee if necessary.
